Discussion 12

SQL

Aditya Balasubramanian aditbala [at] berkeley [dot] edu

Announcements

- Homework 9 due Thursday 4/20.
- Midterm 2 regrade requests due Friday 4/21.
- Optional Scheme Recursive Art Contest entries due Tuesday 4/25.
- Scheme project due Friday, 4/28.
 - Checkpoint 1 due Friday, 4/21.
 - Checkpoint 2 due Tuesday, 4/25.
 - Early submission point for submitting by Thursday, 4/27.

SQL *

SQL

- What is SQL?
 - A declarative programming language
 - Database management
 - Do not describe computations, but rather the desired result of computations
- Resources
 - https://sql.cs61a.org

SELECT

• Create a table with two rows, columns as first and last

```
sqlite> SELECT "Ben" AS first, "Bitdiddle" AS last UNION
...> SELECT "Louis", "Reasoner";
```

```
Ben Bitdiddle
Louis Reasoner
```

SELECT [columns]

FROM

• SELECT specific values from an existing table with a FROM clause

sqlite> SELECT name, division FROM records;

	name	division	
	Alyssa P Hacker	Computer	
_			
	Robert Cratchet	Accounting	
SE	LECT [columns]	FROM [table	s]

WHERE

• filter out rows using a WHERE clause

sqlite> SELECT * FROM records WHERE title = "Programmer";

name	division	title	salary	supervisor
Alyssa P Hacker	Computer	Programmer	40000	Ben Bitdiddle
Cy D Fect	Computer	Programmer	35000	Ben Bitdiddle

SELECT [columns] FROM [tables] WHERE [condition]

ORDER BY

Order rows with the ORDER BY clause

```
sqlite> SELECT name, salary FROM records
...> WHERE division = "Accounting" ORDER BY salary desc;
```

name	salary
Eben Scrooge	75000
Robert Cratchet	18000

```
SELECT [columns] FROM [tables] WHERE [condition] ORDER BY [criteria]
```

Q4, Q5, Q6

JOIN

- What to do when you want to combine data from mutliple tables
 JOIN them!
- What happens when you use the JOIN clause?
 - Have a new row for each combination of the input table
 - If two tables are joined and the left table has m rows and the right table has n rows, then the joined table will have m*n rows

JOIN (Example)

- Let's say we have a meetings table that displays what Day each
 Division has a meeting
- Our goal is to determine what Day each employee has a meeting
- First step
 - Combine table records and meetings
- Second step
 - Only include the rows where the
 records.division = meetings.division

JOIN (Example) (Combining)

SELECT name, day FROM records, meetings;

name	day
Alyssa P Hacker	Monday
Alyssa P Hacker	Monday
Alyssa P Hacker	Wednesday
Alyssa P Hacker	Wednesday
Robert Cratchet	Wednesday

JOIN (Example) (Filtering)

Ambigious Joins

SELECT a.name, b.day FROM records AS a, meetings AS b WHERE a.division = b.division;

name	day
Alyssa P Hacker	Wednesday
Ben Bitdiddle	Wednesday
Robert Cratchet	Monday
STEP BY S	TFP

Q6, Q7, Q8

Aggregation

- What if we want to obtain data from our table (i.e max, min)
 - MAX, MIN, COUNT, and SUM

SELECT name, MAX(salary) FROM records;

name		MAX(sa	lary)
Oliver	Warbucks	150000	

```
sqlite> SELECT COUNT(*) from RECORDS;
```

GROUP BY

group rows in a column to be aggregated with the GROUP BY clause

sqlite> SELECT division, MIN(salary) FROM records GROUP BY division;

division	MIN(salary)
Accounting	18000
Administration	150000
Computer	25000
STEP BY	STEP

HAVING

Filter GROUPS with the HAVING clause

sqlite> SELECT title FROM records GROUP BY title HAVING COUNT(*) > 1;

title

Programmer

STEP BY STEP

Q9 , Q10 , Q11

Thank you!!!
